10am-12pm

BOOK NOW FOR FREE

While AI may assist professional practice,
final judgment remains your responsibility.

A practical webinar for professionals using AI in real-world practice.

WHAT YOU WILL LEARN

1. Understand what AI is and how AI-assisted systems generate material.
2. Recognise where AI can assist — and where it may begin to influence professional reasoning.
3. Understand the limitations and risks, including inaccuracy, omissions, bias and over-reliance.
4. Learn what meaningful professional verification involves and why it must go beyond proofreading.
5. Reinforce the continuing role of independent professional judgement and accountability.
6. Identify key safeguards around AI use (confidentiality, transparency, documentation, competence and escalation).
7. Understand responsibilities for independent practitioners, consultants, contractors, case managers and expert witnesses.
8. Apply learning to realistic professional scenarios.

COURSE CONTENT

AI in professional practice
What it is and how it works.

Useful assistance vs substantive reasoning
Where AI helps and where it can mislead.

Reliability and influence
Why fluent or persuasive output cannot be assumed to be accurate.

Verification
What meaningful checking involves (source, accuracy, completeness, context, alternatives).

Professional judgement
Cognitive off-loading, automation bias and maintaining independent reasoning.

Governance and safeguards
Confidentiality, transparency, documentation, competence and escalation.

Accountability
What remains the professional's responsibility, including when working independently.

Interactive scenarios
Applying the framework to real-world professional situations.

Sian Francis

Registered Nurse, Case Manager and Expert Witness

Sian Francis is a Registered Nurse, Rehabilitation Case Manager and Expert Witness, with more than 15 years experience as a Registered Nurse across NHS, private and corporate environments.

Her clinical background spans intensive care, emergency, medical, surgical and community settings, with particular experience in brain, catastrophic and complex orthopaedic injury.

Building on this experience, she has held roles in leadership, management, assessment and project work, developing a strong focus on critical analysis, professional judgement and defensible reporting. Her current work as a Case Manager and Expert Witness includes quantum and liability matters, all undertaken alongside her clinical practice.

Her interest in artificial intelligence grew from recognising its growing presence in professional practice and the consequences when technology is treated as harmless because it appears efficient or familiar. Her concern is for those vulnerable to the consequences of professional reliance on AI when its limitations, errors or wider implications are not fully recognised.

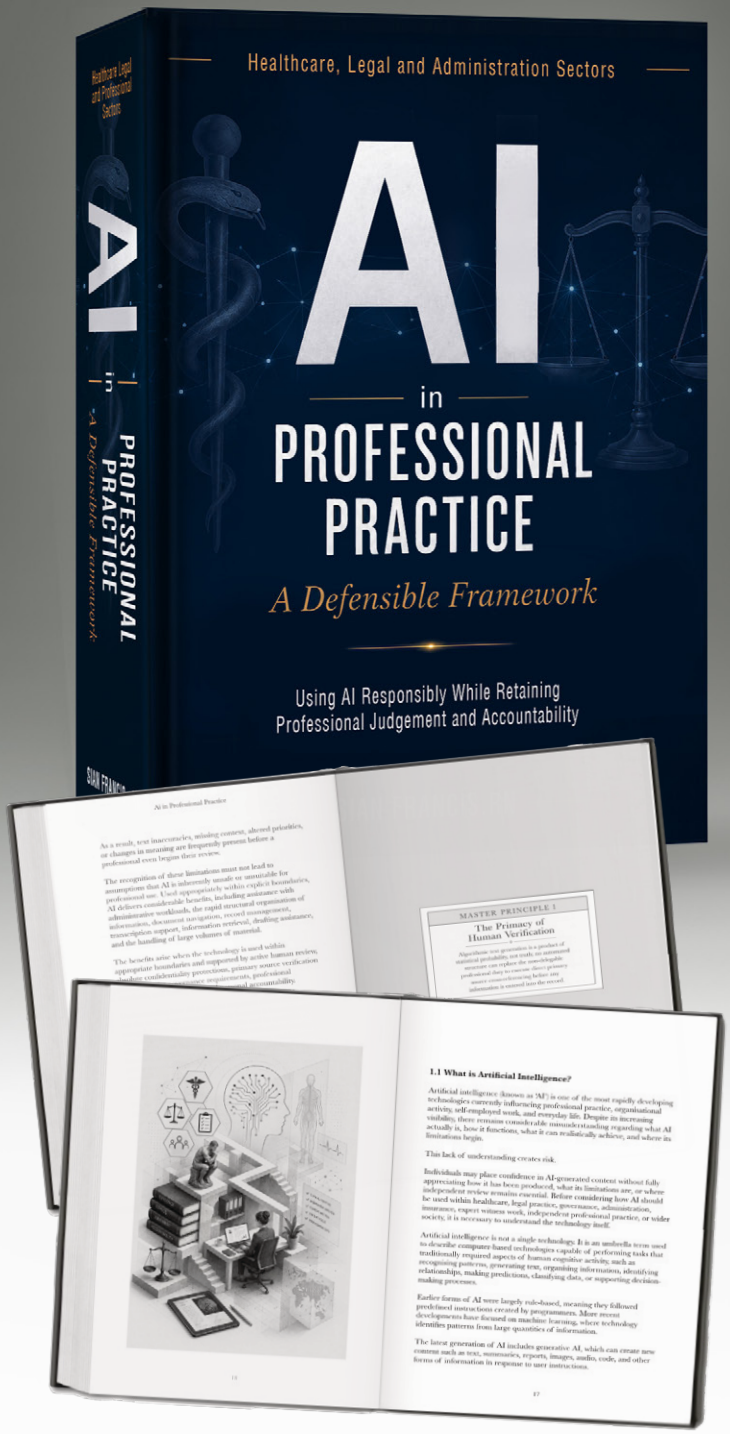

This led her to explore not only what AI can do, but what professionals need to consider to ensure its use does not undermine professional judgement, accountability or the protection owed to those they serve.

AI in Professional Practice: A Defensible Framework brings together her professional experience with her work examining AI, professional responsibility, governance and defensible practice. This work led to the development of an original framework of its kind: an approach designed not only to govern the professional use of AI, but to guide those who use it, safeguarding the interests of those they represent while preserving professional integrity, accountability and defensible practice.

Now Available

"Faster technical progress makes human judgment and public coordination more important, not less."

Sam Altman. CEO. and Jakub Pachocki. Open AI

"AI cannot replace your professional judgement or responsibility. Use it to support your work, not make decisions."

— UK Government, AI Knowledge Hub

THE PROFESSIONAL PRACTICE STANDARD FRAMEWORK™

The essential new work

for everyone working with AI in legal, healthcare and administration.

While AI may assist professional practice, final judgment remains your responsibility.

AI in Professional Practice: A Defensible Framework™ provides an indispensable practical framework for using AI responsibly while retaining professional judgement, verification, governance and accountability.

- Identify where AI can assist.
- Recognise its limitations.
- Verify what must be checked.
- Defend what you ultimately rely upon.

For legal, healthcare and administrative professionals working within every sector in the industry.

AI may change how we work.

But it should not change who remains responsible for the work.

— Sian Francis . RN
